

Feedback

- ☐ Wet diaper log toast doesn't disappear
 - Other tracking, like sleep/feed, is fine. But this one stays and it's not intuitive to the user on mobile that you can drag down to make it disappear

- ☐ Last activity time at the top causes the cards to be different sizes
 - Can either standardize the size or reduce the details of minutes if we're past X hours since last log

- ☐ In user Settings, if I select Gender for **WHO chart sex** first and then update **Date of birth**, my selection for gender disappears
- ☐ For Growth, we should add a Setting if the user prefers metric vs US system
 - Currently, we default to cm and kg, but there's no way to switch to US system if that's my preference. Most initial users will likely be US-based
